

WORKING WITH PROJECTS

USING PROJECT DOCUMENTATION

Documentation in the Grundfos Product Center

The Grundfos Product Center provides access to virtually all available information about Grundfos pumps.

This information can include:

- Quotation text
- Data sheets
- Curves
- Wiring diagrams
- Illustrations
- Lifecycle cost reports
- And much more...

Gather pumps and documentation into projects

The Projects function, lets you create groups of pumps, along with any available documentation for each pump.

At any time while working on a project, you can create a PDF containing the exact documentation you need for all pumps in the project.

Doing so can save you time and hassle when sharing information and preparing tenders.

Creating a documentation PDF

To create a documentation PDF, click the PDF / PRINT button at the top of your project page.

This opens a large dialog box, where you can choose exactly the information you'd like your document to include for all pumps.

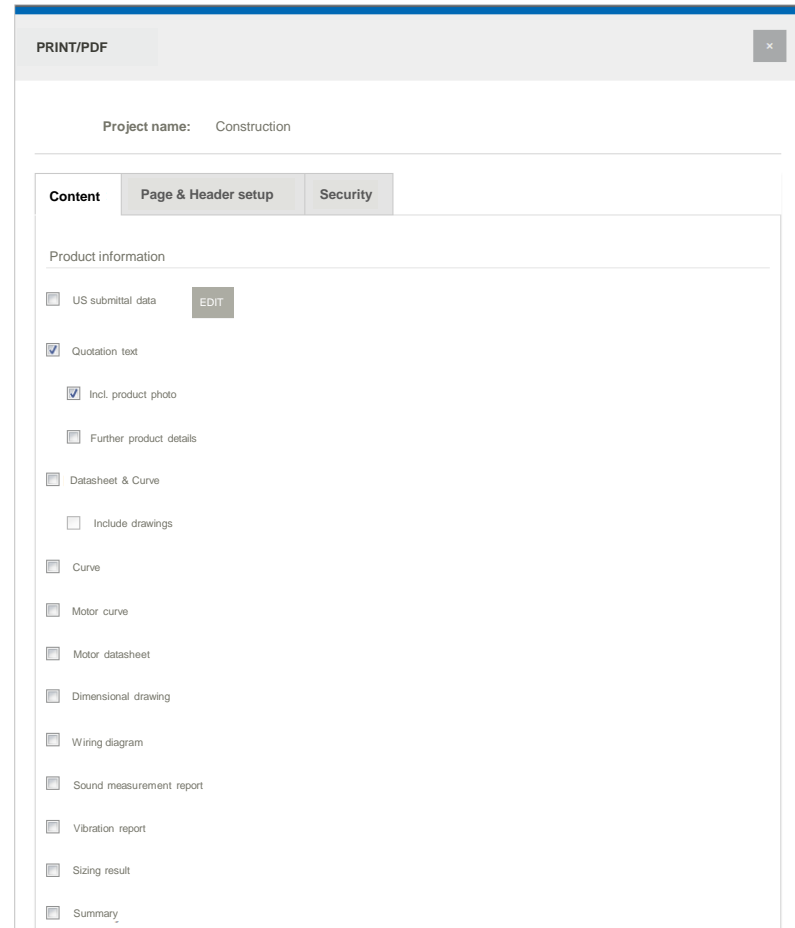

Click PRINT / PDF to generate a PDF containing all project documentation

Content, formatting and security options

The PRINT / PDF dialog box contains 3 tabs. The Content tab lets you choose the types of documentation you want to include in your PDF – from technical specs to wiring diagrams.

The Page & Headers setup tab provides access to the usual formatting and printing setup options. And the Security tab lets you protect your PDF with a password and set usage rights.

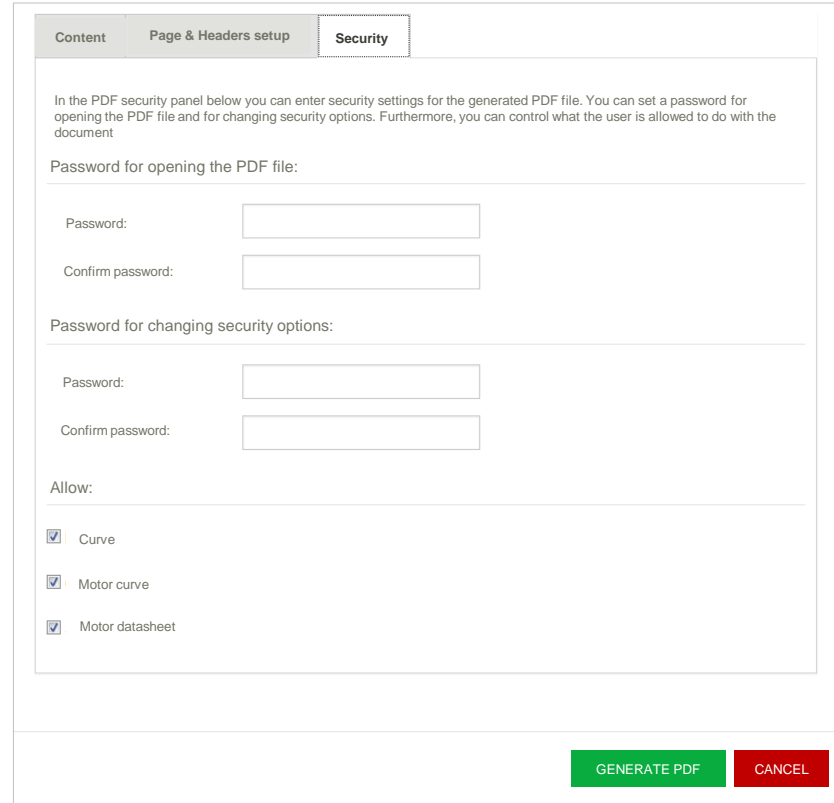

The screenshot shows the PRINT/PDF dialog box with the 'Content' tab selected. The project name is 'Construction'. The 'Content' tab is active, showing a list of product information items with checkboxes and an 'EDIT' button. The items are:

- US submittal data (EDIT)
- Quotation text
 - Incl. product photo
 - Further product details
- Datasheet & Curve
 - Include drawings
- Curve
- Motor curve
- Motor datasheet
- Dimensional drawing
- Wiring diagram
- Sound measurement report
- Vibration report
- Sizing result
- Summary

Generating and using your PDF

When you have finished setting up your document, click **GENERATE PDF** at the bottom of the dialog box to create your online documentation PDF.

If you have allowed printing under the Security tab in the dialog box, you'll be able to print your PDF and save it for subsequent printing or sharing.

The screenshot shows a dialog box with three tabs: "Content", "Page & Headers setup", and "Security". The "Security" tab is active. The panel contains the following text: "In the PDF security panel below you can enter security settings for the generated PDF file. You can set a password for opening the PDF file and for changing security options. Furthermore, you can control what the user is allowed to do with the document". Below this, there are two sections for password entry. The first section is titled "Password for opening the PDF file:" and has two input fields labeled "Password:" and "Confirm password:". The second section is titled "Password for changing security options:" and also has two input fields labeled "Password:" and "Confirm password:". Below these is an "Allow:" section with three checked checkboxes: "Curve", "Motor curve", and "Motor datasheet". At the bottom right of the dialog box, there are two buttons: a green "GENERATE PDF" button and a red "CANCEL" button.

Be sure to select "Printing" under "Allow" on the Security tab to be able to save and print your PDF
